

MAGIC BASEBALL

THIS MACHINE CREATES MORE EXCITEMENT AND CAN TAKE IN MORE MONEY THAN ANY AMUSEMENT MACHINE DESIGNED IN THE LAST 10 YEARS.

The plastic baseball actually floats in mid air on a column of air.

The air can be adjusted by the operator, to raise or lower the ball. When the baseball is at the right height, the player pushes the operator button, and the batter swings. If he hits the ball straight on, it will go into a trough in the back of the machine, rolls by a switch which registers a home run and then pops back up ready for the next swing.

Each player gets 9 swings for 10 cents.

Playing time is approximately 2 minutes.

Free play switch can be adjusted from 4 to 9 home runs. These machines have been on location for over 10 months, as of October 1, 1966, and are trouble free.

Constructed of heavy 18 gauge steel, and painted a formal flat black with highly polished stainless steel trim. A black light accentuates the colorful inside design. There are 3 motors, 1 blower, 4 relays and 9 switches.

If you want a machine that fascinates both young and old, order your **MAGIC BASEBALL** today!
