MMI'S DELUXE CONSOLE MODEL 94

A HI-CAPACITY BULK BILL/COIN CHANGER

FLEXIBLE CHANGE PAYOUTS FOR VENDING,
ARCADES AND LAUNDRIES

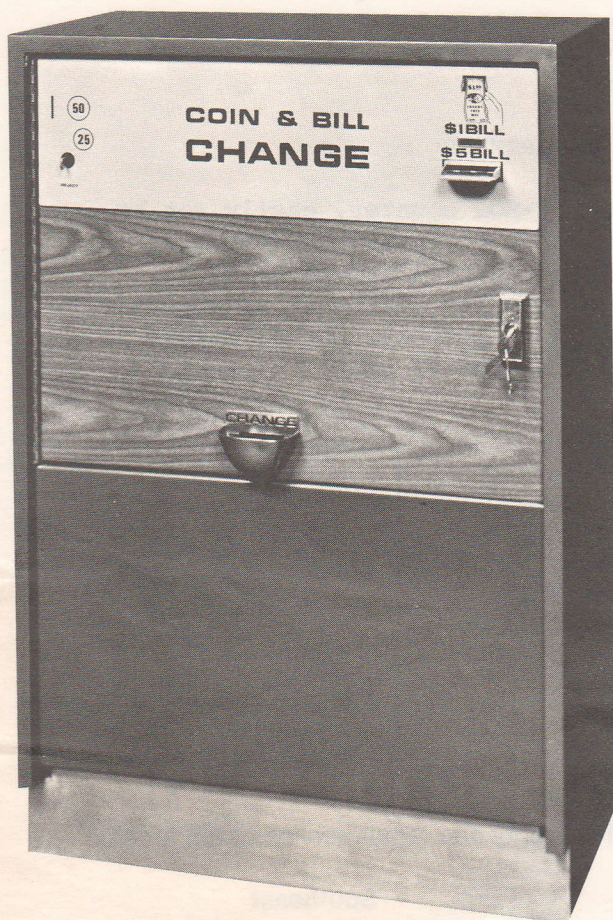

These handsome designer cabinets ruggedly house a basic bulk changer that can serve many local coin needs. Optionally available to handle \$1 & \$5 bills, it also makes change for half dollars and quarters and the SBA coin. Equipped with 1 to 4 interchangeable hoppers. The capacity ranges from \$600 to \$3,000. Change combinations are programmed by a simple "dip-switch" selection. Laundry version (L) also takes dimes and nickels and gives quarters.

TOKENS

The standard hopper will pay out nickels or quarters and, also, without any adjustment, handle all industry tokens from .882" dia. through .984" dia. The flip of a switch converts the Model 94 to sequential payout of the same coin for each hopper for maximum capacity.

BILL STACKER

The MMI Model 1390 D motor driven, cartridge bill stacker is standard equipment and stores over 750 bills. With 20% in \$5 bills, this provides a \$1,300 capacity, enough for the standard payout. When the maximum sequential mode is used, an optional deep cartridge holds over 3,000 bills with storage for \$5,000.

Rugged cabinet made of
10 & 12 ga. welded steel
vault construction.
Vinyl trim and baked
bronze enamel finish
standard.

HOPPER SYSTEM

MMI's new simplified mechanical tube pay-out hopper is the result of 11 years refinement in bulk coin handling. Reduced to a minimum number of operating parts, this innovatively clever system is both reliable and versatile. The strong 115V A.C. motor/pulley and belt for a unit drive train lifts the coins, one to a pocket, then drops them into the tube slide. Smooth angles and flexible roll breakers keep coins in pockets at all levels. Teflon coating reduces friction and wear. The dual tube switches sense coin levels and stop the belt motor when sufficient coins are present for a maximum vend. Feed rates will keep up with most all coin payouts and storage is usually not depleted.

A rotary motion shuttle picks one coin from the bottom of the tube stack at each solenoid actuation and drops them out a hole to the cup.

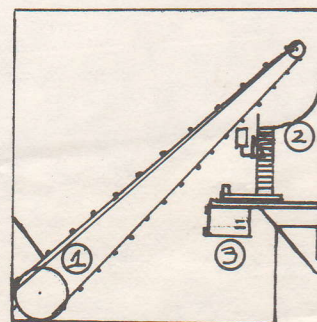

FLEXIBLE PROGRAMMER

A versatile C-MOS counter, easily set by a "dip-switch", programs the number of coins for the \$1 bill from 1 to 15 as desired. A similar switch setting controls how many times (1 to 15) the \$1 payout is multiplied for the \$5 bill.

SPECIFICATIONS

Height:	48"
Width:	30"
Depth:	16"
Weight:	185 lbs.
Electrical:	115V AC
	60Hz $\pm$ 10%
	2.7 amp standby
	10 amp operating
Temperature:	32°F to 135°F
	(0°F w/heater)
Hoppers:	2850 Q, 3000 N, 7000 D

- (1) Motor
- (2) Coin switch
- (3) Solenoid/Shuttle

MMI maintains a complete stock of genuine parts and offers a full warranty and repair service at the factory and two regional centers:

West
4083 Transport St.
Palo Alto, CA 94303
(415) 321-5520

Central
350 Lively Blvd.
Elk Grove Village, IL 60007
(312) 437-6120

Southeast
3625 S. Interstate 85
Charlotte, NC 28208
(704) 394-6524

TO ORDER: See your equipment distributor or call our factory.
