INTRODUCTION

Welcome to the NEO-GEO MULTI VIDEO SYSTEM. This unique system by SNK enables you to save space and maximize your income with PCBs of high quality and of easy maintenance.

The newly developed MV-1FZ has been more compactly designed than any former PCBs for carrying one NEO-GEO game, and the PCB can be directly connected to the JAMMA standardized cabinet.

Income data keeping and other featured functions of all NEO-GEO systems are of course available with MV-1FZ, too.

Please read this service manual carefully before starting to use the MVS and keep it at your side for further reference.

2-6 INCOME DATA KEEPING SYSTEM

2-6-1 Data Keeping

The MVS contains RAM for back-up and IC for calender in the system. Income and other data of the games being used are kept in the memory even when the power is off.

★Data of a maximum 8 games can be kept at the MVS, even the game cartridges are removed from the PCB.

For example: 2 games, A & B are being used on the MVS. If new game titles C & D are used to replace A & B, the previous data for A & B will remain.

When the game cartridges, once removed, are set again later, new data will be added to the previous data.

When more than 8 games are used, the oldest game's data will be deleted from the memory to input data for the newest game.

To go to the Income Data Keeping System, press the "TEST" button in the cabinet and select "BOOKKEEPING" mode on the screen.
