SINGLE SIT-IN STYLE CABINETS

SECTION ONE

Operation

NOTICE

Information in this manual is subject to change without notice. MIDWAY reserves the right to make improvements in equipment function, design, or components as progress in engineering or manufacturing methods may warrant.

Fill out and mail in the Game Registration card. Be sure to include the game serial number from the label on the rear of the cabinet. For your records, write the game serial number in the manual. SERIAL NUMBER _____

SAFETY NOTICES

The following safety instructions apply to all game operators and service personnel. Specific warnings and cautions will be found throughout this manual where they apply. We recommend that you read this page before preparing your game for play.

CAUTION

LINKING GAMES: The linking feature does not work if the master game is off line, in diagnostic mode, or if AC power is not on. Linking only works if the master game is active and in normal game play mode.

TRANSPORTING THE GAME: This game contains glass and fragile electronic devices. Do not move this game with power on. Avoid rough handling. Secure the game well during transport.

HANDLING ELECTRONIC DEVICES: This product uses complex electronic components that are very SENSITIVE to static electricity. The following precautions must be observed and followed prior to handling any of the game electronics.

- 1) Discharge any static electricity build up in your body by touching the safety ground stud of the power supply chassis. This is to be done BEFORE touching or handling the electronic assemblies.
- 2) Store the electronic assemblies in an anti-static area. Anti-static bags are to be used to store or transport the CPU assembly. Replace ground wires, shields, safety covers, etc. when service is complete.
- 3) DO NOT remove or connect any electronic assemblies when the cabinet power is on. Doing so will damage the electronic assemblies and void the warranty.

ISOLATION TRANSFORMER: This video game system does not utilize an isolation transformer. No isolation exists between the cabinet AC system and the external AC line.

PROPERLY GROUND THE GAME: To avoid electrical shocks, do not plug in the game until it has been inspected and properly grounded. This game should only be plugged into a grounded 3-wire outlet.

DISCONNECT POWER DURING REPAIRS: To avoid electrical shock, disconnect the game from the AC power source before removing or repairing any part of the game. Be sure to reconnect all ground wires.

USE THE PROPER FUSE: To avoid electrical shock, all replacement fuses must match the original fuses in fuse type, voltage rating, and current rating.

HANDLE FLUORESCENT TUBE AND CRT WITH CARE: If you drop a fluorescent tube or CRT and it breaks, it will implode! Shattered glass can fly eight feet or more from the implosion.

EPILEPSY WARNING

A very small portion of the population has a condition which may cause them to experience epileptic seizures or have momentary loss of consciousness when viewing certain kinds of flashing lights or patterns that are present in our daily environment. These persons may experience seizures while watching some kinds of television pictures or playing certain video games. People who have not had any previous seizures may nonetheless have an undetected epileptic condition.

If you or anyone in your family has experienced symptoms linked to an epileptic condition (e.g. seizures or loss of awareness), immediately consult your physician before using any video games.

We recommend that parents observe their children while they play video games. If you or your child experience the following symptoms: dizziness, altered vision, eye or muscle twitching, involuntary movements, loss of awareness, disorientation, or convulsions, DISCONTINUE USE IMMEDIATELY and consult your physician.

ATTENTION!

PROPERLY ATTACH ALL CONNECTORS. Make sure that the connectors on each printed circuit board are properly connected. Do not force connectors that do not slip on easily. Reversed connectors may damage your game and void the warranty. All connectors are keyed to fit specific pins on each board.

Setup Procedure

GAME LOCATION REQUIREMENTS

Power: Domestic 115V @ 60 Hz, 4 Amps
Foreign 230V @ 50 Hz, 2 Amps
Japan 100V @ 50 Hz, 4 Amps

Temperature: 32° F to 100° F
(0° C to 38° C)

Humidity: Not to exceed 95% relative.

DIMENSIONS

SHIPPING	Width	Depth	Height	Weight
25" Game	32"	39"	74"	300 Lbs.
31" Game	34"	53"	77"	570 Lbs.
Pedestal	22"	36"	51"	125 Lbs.

ASSEMBLED	Width	Depth	Height
25" Game	30"	66"	75"
31" Game	32"	80"	79"

INSTALLATION AND INSPECTION

- 1) Remove all items from shipping containers and set aside. Casters, levelers, and mounting hardware are packed with the pedestal section. Inspect the exterior of the cabinet for any signs of damage.
- 2) Remove the keys from the steering wheel. Unlock and open the coin and cash box doors. Electrical cords and spare parts are stored in the cash box.
- 3) Install one nut onto each leg leveler. Tilt as needed to locate four threaded holes under the cabinet and three under the pedestal. Install a leveler and nut into each hole. Do not tighten nuts at this time.

WARNING

The cabinet is top heavy.

- 4) Locate the caster wheel assemblies. Lay cabinet on its back or side and attach one caster onto each group of threaded studs. The cabinet uses four swivel casters, one in each corner. Repeat this for the pedestal. The pedestal uses three casters, one swivel type in front and two locking type in back.

CABINET SECTION

- 5) Stand cabinet upright and make certain it is in a stable position. Move the game to its intended location and level the cabinet. Distribute weight equally on each corner and tighten the leveler nuts.
- 6) Remove the rear door of cabinet. Inspect cabinet interior for any signs of damage. Check all major assemblies to assure that they are mounted securely.
- 7) Refer to the game's Cabinet Wiring Diagram (Section Three of this manual) and check to see that all cable connectors are correctly secured. Inspect for damaged connectors. Be sure **NOT TO FORCE CONNECTORS** and avoid making reversed connections.

- 8) The power cord is with the spare parts. Remove and save four screws from the line cord cover plate at the rear of the cabinet. Match the holes on the IEC plug with the prongs in the receptacle and push firmly to seat the line cord. Hold the cord flat against the cabinet and reinstall the cover plate (the indentation should point down so that the cord exits toward the bottom of the cabinet as illustrated).
- 9) Determine the value of your AC line voltage with a voltmeter. Check the fluorescent lamp assembly voltage rating and power supply line voltage switch to be sure each corresponds to your line voltage.

- 10) An extra padlock may be installed to secure the rear door. A hasp is located in the spare parts bag. Remove the two lock bracket nuts from inside the cabinet, above the rear door opening. Slide the hasp onto the bolts so that it protrudes from the hole in back of the cabinet, then reinstall the nuts.
- 11) Modify the lock plate at the top of the rear door. Remove the bolts and nuts from the lock plate, then rotate the plate so that the slot will be above the door. Reinstall the bolts and nuts and tighten firmly.

- 12) Reinstall the rear door onto the cabinet and close it. Lock the rear door and remove the key. If required, install the extra padlock through the hasp at this time. Install the screws at the top and sides of the rear door and tighten snugly. Close and lock the cash box and coin doors.

NOTE

Tamper resistant screws and matching wrench are provided with this game for additional security. Four tamper resistant screws and one wrench are located in the spare parts bag. If desired, replace the original screws with the tamper resistant screws. Tighten the screws firmly with the wrench.

- 13) The pedestal assembly mounting rails are shipped bolted to the inside of the cabinet. Remove all of the 1/4-20 hex-head bolts holding the rails. Pull the rails forward (see above diagram for proper placement) and reinstall the same bolts finger tight. Do not tighten these bolts at this time, as some movement is required in the mounting rails to align holes with pedestal assembly.
- 14) Align the opening in the pedestal with the ends of the rails. Slide the pedestal forward onto extended mounting rails and align the holes. Attach pedestal assembly using 1/4-20 tamper proof screws and large flat washers. A T27 wrench is included with the spare parts to tighten these screws firmly.
- 15) Plug the game into a grounded (3-terminal) AC wall outlet. Switch ON the game using the ON/OFF switch located on the upper left top of the cabinet. The game will power up and begin self-diagnostics. If no errors are found, the game will automatically enter its "attract" mode of operation.

MAINTENANCE

Viewing Glass

It is not necessary to switch off power to the game to clean the glass. Apply a mild glass cleaner to a clean cloth or sponge, then use this to wipe the viewing glass. **Do not apply cleaner directly on the glass!** Liquid could drip down into switch or control circuits and cause erratic game operation.

Controls and Cabinet

Use plastic-safe non-abrasive cleaners to avoid damage. Apply cleaner to a clean cloth or sponge, then use this to wipe the controls or cabinet. **Do not apply cleaner directly on controls or cabinet!**

SERVICING

We recommend that you read the SAFETY NOTICES section thoroughly before beginning service.

Always turn off power to game before servicing.

- **MARQUEE**

Remove five hex-head wood screws that hold the marquee-retaining strip to the top of the cabinet. Remove the retaining strip. Lift the marquee glass out of the top grooves and set in a safe place.

WARNING

The marquee glass could fall out of the cabinet when the retaining strip is removed.

- **FLUORESCENT LAMP OR STARTER**

Remove the marquee retaining strip, glass and artwork. Remove the fluorescent lamp locks. Grasp the tube, give it a quarter turn and pull it from its socket. The starter also requires a quarter turn for removal or installation. Carefully place a new tube into the socket and rotate it a quarter turn to reinstall. Clean the tube to remove fingerprints and dust.

WARNING

If a fluorescent tube drops and it breaks, it will implode! Use care in handling.

- **FLUORESCENT LIGHT ASSEMBLY**

Remove the marquee retaining strip, glass and artwork. Disconnect the power cable from the fluorescent light assembly. Loosen but do not remove the screws fastening the assembly to the cabinet. Slide the assembly slightly forward to disengage the keyholes. Lift out the assembly.

- **SEAT**

Use the T27 tamper proof wrench to remove three screws from each side of the seat mounting plate. Lift the seat and mounting plate assembly off the pedestal. Place the seat on its back, on a flat surface. Remove the six bolts under the mounting plate to separate the seat from the plate.

IMPORTANT: Apply removable anaerobic adhesive thread lock (Loctite Blue 242 or equivalent) and torque each bolt to seven to nine ft.-lbs (84 to 108 in.-lbs) during re-assembly.

- **SEAT SLIDE ASSEMBLY**

Use the T27 tamper proof wrench to remove three screws from each side of the seat mounting plate. Lift the seat and mounting plate off the pedestal assembly and set aside. Slide the seat assembly forward, and remove the two tamper proof torque screws from the metal panel on top of the pedestal assembly. Slide the seat back and remove the two front torque screws. Lift the metal panel out of the pedestal base and turn the unit over. Remove the four nuts holding the metal panel to the slide assembly. Set the metal panel aside and the slide assembly is exposed.

IMPORTANT: Apply removable anaerobic adhesive thread lock (Loctite Blue 242 or equivalent) and torque each bolt to seven to nine ft.-lbs (84 to 108 in.-lbs) during re-assembly.

- **SPEAKERS**

NOTE: The speakers are magnetically shielded to prevent video monitor color impurity. Be sure that any replacement speakers are also magnetically shielded.

Upper (25" and 31" cabinets, two 5.25" full range): These speakers are under the marquee. Remove the marquee, glass and artwork. The speakers come out from the front of the cabinet. Be sure to disconnect the cabling and remove the nuts on the mounting screws before attempting to remove the speakers from the enclosure. Carefully reseal the seals upon completing any task in the speaker enclosure. Refer to the Cabinet Wiring Diagram for correct speaker polarity.

Lower (25" cabinet, one 6" woofer; 31" cabinet, one 8" woofer): The lower speaker is located near the gas and brake pedals. Unlock and remove the rear door. Disconnect the cables that go to the electronics rack assembly. Unscrew the rack and set it aside. Reach through the cabinet and disconnect the speaker cables. Remove the nuts on the mounting screws and pull the speaker out of the cabinet. Carefully reseal the seals when replacing the speaker.

- **DASH BOARD**

25" Cabinet: Use the T27 wrench to remove four tamper proof screws at the dashboard front corners. Pull the dashboard forward. Disconnect the wiring harness and ground strap. Before reinstalling the dashboard, ensure that harnesses and ground strap are reconnected.

31" Cabinet: Use the T27 wrench to remove seven tamper proof screws from the top cover. Lift the top cover off of the game cabinet. Remove four tamper proof screws from the front corners of the dashboard. Pull the dash forward. Disconnect the wiring harness and ground strap. Before reinstalling the dashboard, ensure that harnesses and ground strap are reconnected.

- **VIEWING GLASS**

25" Cabinet: Use the T27 wrench to remove four tamper proof screws at the dashboard front corners. Pull the dashboard forward enough to expose the bottom of the glass. Grasp the edge of the viewing glass at the notch. Slide the glass out of the side grooves and lift it off the cabinet.

31" Cabinet: Use the T27 wrench to remove seven tamper-proof screws from the top cover. Lift the top cover off of the game cabinet. Remove three 1/4-20 bolts from the viewing glass retaining bracket. Grasp the glass at the bottom. Slide it out of the side grooves and lift it off the cabinet.

- **MONITOR BEZEL**

25" Cabinet: Remove the dashboard and viewing glass. Grasp the monitor bezel at the bottom and lift it out of the groove. Remove the bezel from the cabinet.

31" Cabinet: Remove the top cover screws and the cover. Remove the bracket and the viewing glass. Grasp the bezel at the bottom and lift it out of the groove. Remove bezel from the cabinet.

- **MONITOR**

We recommend that you read the WARNINGS thoroughly before beginning this procedure.

CAUTION

THE VIDEO MONITOR IS HEAVY, WITH MOST OF THE WEIGHT TOWARD THE FRONT OF THE ASSEMBLY. BE SURE IT IS FIRMLY SUPPORTED AS IT IS REMOVED FROM THE CABINET.

The monitor does not require isolation from the A.C. line voltage in normal operation. However, when operating outside the cabinet or servicing the monitor on a test bench, YOU MUST ISOLATE THE MONITOR FROM LINE VOLTAGE WITH AN ISOLATION TRANSFORMER.

25" Cabinet: Remove the dashboard, viewing glass, and monitor bezel. Disconnect the monitor from the wiring harness and ground wires. Remove four 1/4-20 flange nuts securing the monitor mounting flanges to the mounting panel. Pull the monitor carefully from the cabinet and set aside.

31" Cabinet: Remove the top cover, dashboard, viewing glass, and monitor bezel. Remove two T27 tamper-proof screws from the left and right sides of the cabinet as illustrated. Remove three 1/4-20 flange nuts located above the monitor. Tilt the monitor down from the top and pull it out of the cabinet. Set the monitor aside.

If a different monitor is to be installed, remove three 3/8-16 hex bolts from the bracket at the bottom of the monitor. Install this bracket and its bolts onto the bottom of the new monitor. Slide the bottom of the monitor into the cabinet and tilt it up from the top. Replace the flange nuts at the top of the monitor, and the screws on the outside of the cabinet.

- **VIEW BUTTONS OR THE SHIFTER**

Use the T20 wrench to remove four tamper proof screws from the plate surrounding the buttons or the shifter. Pull the plate forward enough to expose the switches. Label and disconnect wires.

NOTE: This game has different switch wiring than previous games with these assemblies. Green wires connect to NC contacts. Incorrect connection will result in switch test failure.

- **START AND RADIO BUTTONS**

Use the T27 wrench to remove four tamper-proof dashboard corner screws. Pull the dashboard forward enough to expose the switches. Label and disconnect the wiring harness. Unscrew the switch mounting nut and pull the entire switch out from the front of the dash. Depress the snap locks to separate the switch assembly from pushbutton or to expose the light bulb.

- **WHEEL ASSEMBLY**

Use the T27 wrench to remove four tamper proof dashboard corner screws. Pull the dashboard forward enough to expose and disconnect wires. Lift the dashboard off the cabinet and set aside. Remove three screws at the steering wheel center. Pull the wheel hoop off of the dashboard. Remove four 1/4-20 flange nuts holding the shield, motor and shaft to the wheel assembly (shield not required on 31" cabinets). Slide the motor and the shaft off of the assembly.

IMPORTANT: Apply removable anaerobic adhesive thread lock (Loctite Blue 242 or equivalent) and torque set screw to seven to nine ft.-lbs (84 to 108 in.-lbs) if it was loosened (see illustration).

BACK VIEW OF 3 BUTTON ASSEMBLY

RADIO BUTTON

START BUTTON

BACK VIEW OF GEAR SHIFTER

- **MEMORY**

The ROM (Read Only Memory) circuits contain the computer operating instructions for this game.

Switch off power to the game. Carefully note the position, then remove using a chip extraction tool.

To reinstall memory circuits, orient a chip over its socket and press firmly to seat pins. *Do not force.*

CAUTION *Discharge any static electricity build up in your body by touching the power supply chassis. This is to be done **BEFORE** touching or handling the electronic assemblies.*

- **BATTERY**

Switch off power to the game. Carefully note the position, then gently lift the contact arm to release tension. *Do not bend the arm.* Slight finger pressure may be needed to pry the cell from its holder.

To reinstall the battery, orient cell near its holder and slide it in under the contact arm. *Do not force.*

CAUTION *Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to instructions printed on the battery or the manufacturers packaging.*

NOTE: To avoid explosion, all replacement batteries must match the original in size, voltage rating, and composition. Manufacturer recommended equivalent types are acceptable. Do not attempt to recharge these batteries; remove them from their holders and store in a safe place until repairs have been completed. Avoid direct shorts across terminals or from terminals to ground! Dispose of used batteries according to the manufacturer's instructions.

- **POWER SUPPLY**

Switch off power to the game. Remove screws, then unlock and remove the rear door. Unplug the IEC A.C. connector from the rear of the supply and the D.C. connector from the front. Remove two front and two rear screws from the supply, then lift it off of the power chassis. Note voltage setting.

To reinstall the power supply, set the voltage switch to the correct value. Set the supply on the power chassis and align the mounting holes. Install the four screws and the two power connectors.

- **WHEEL BOARD ASSEMBLY**

Switch off power to the game. Unlock and remove the rear door. Carefully note the orientation of the cables. Extract the harness and other cables from the board connectors. Remove the Wheel Board Assembly mounting screws. Lift the board out of the cabinet and set in a safe place.

- **CPU BOARD ASSEMBLY**

Switch off power to the game. Unlock and remove the rear door. Remove the RF Cage top to expose the CPU Board Assembly. Carefully note the orientation of the JAMMA connector and the other cables. Extract the harness and other cables from the board connectors. Remove CPU Board Assembly mounting screws. Lift the board out of the cabinet and set in a safe place. Anti-static bags and protective containers from new parts may be used for storage if not to be reinstalled immediately. Be certain to reinstall the RF Cage top so that it seals tightly against the RF Cage bottom.

- **PEDAL ASSEMBLY**

Switch off power to the game. Unlock and remove the rear door. Carefully note the orientation of the cables. Disconnect pedal assembly cable from wiring harness. Adjust the seat to the maximum rear position. Remove the four outer screws from the pedal plate. Pull the assembly forward enough to expose the ground wire. Disconnect ground wire and remove the pedal assembly from the cabinet.

- **COIN METER**

Switch off power to the game. Unlock the cash door and swing it open. Remove the cash tubs. The meter is located on a plate at the vault bottom. Remove the screws and lift the plate just enough to disconnect the meter wires from the harness. Record the meter count before testing or replacement.

- **COIN MECHANISM**

Switch off power to the game. Unlock the coin door and swing it open. Unlatch and remove each coin mechanism separately to clean or replace with a different type. Ensure that mechanism seats fully in the holder upon reinstallation. Close and lock the release latch, then close the door. Turn on the game and change the mechanism setup, then test known good and bad coins to verify operation.

- **DOLLAR BILL VALIDATOR**

(Use MARS AE2411-U3 U.L. Recognized currency changer)

Dollar bill validators or other currency acceptors may be installed in games that were manufactured with the additional wiring connector. Switch off power to the game and unplug the A.C. line cord. Unlock the coin door and swing it open. Read door label for additional information. Disassemble the validator and remove material to permit fit inside the coin door as illustrated, then reassemble the unit.

Remove nuts, spacers, and cover plate from the door. Change switch settings or make adjustments before mounting the unit. If the manufacturer has supplied an adapter plate, place it over the door cutout at this time. Install spacers on threaded studs, then align the validator mounting holes with the studs and seat the unit in the door opening. Install the nuts and tighten firmly. Attach the ground wire (green with yellow stripe) lug to the door ground stud next to the hinge. Mate the wiring harnesses and press to fully seat connectors. Route wires away from door edges and hinge. Inspect for proper bill chute alignment. Plug in the line cord and turn on the game. Change the mechanism setup and pricing, then test known good and bad bills to verify proper operation. Close and lock the coin door when correct. Reverse these steps to remove a validator for service or replacement.

Game Features

OFFROAD CHALLENGE is shipped configured as a one-player game. Cabinets may be linked to permit player competition. A lighted header option is available.

STARTING UP

Switch ON power to the game. The game begins the Start-up Tests. A "rug" pattern appears on the CRT screen. When the "rug" pattern ends, the screen shows a CPU Board map. Bad ICs are indicated in red, good ICs are in green. The software revision level is shown at the top of the screen.

A machine status screen will appear for about ten seconds. This is a game network activity report. This screen is used to verify and troubleshoot connections between cabinets when they are linked.

NOTE: When an error is detected during the Start-up Tests, game start-up does not progress, and an error message appears on the screen. Record any messages before attempting to service the game.

Before the game starts, the "attract" screens endlessly cycle through scenes and sounds from typical races on each of the tracks. Insert the desired amount of coins or tokens and press start to begin.

PLAYER CONTROLS

- **Start/Nitro button (green)**
The start button begins game play or adds a sudden burst of power during a race.
- **Radio button (orange)**
The radio button allows the player to turn radio sounds on and off, and change stations.
- **View 1 button (red)**
This button shows the view from the cockpit of the vehicle. This is a normal driver view.
- **View 2 button (white)**
This button shows the view from directly above. The player can see the vehicle front.
- **View 3 button (blue)**
This button shows an aerial view. This is what a helicopter camera would see.

PLAYER CONTROL LOCATIONS

Game Operation

The game Control Switches are located inside the coin door. These switches allow the operator to customize some features of the game. The video monitor picture adjustments may also be optimized.

CABINET SWITCHES

- The **ON/OFF SWITCH** is located on the top right side of the cabinet.
- The **MONITOR REMOTE ADJUSTMENTS** are located inside the coin vault. Use the monitor test screens with these controls to adjust the video image size, brightness, contrast, etc.
- The **SLAM TILT SWITCH** detects any forceful vibrations against the coin door. This eliminates pounding for free games. It is located on the inside of the coin door opening.
NOTE: The Slam switch is not present on DBV ready doors.

CONTROL BUTTONS

- The **TEST BUTTON** activates the game Menu System. Press the Test button to access the Main Menu and select individual diagnostics, audits, utilities, etc.
- The **VOLUME UP BUTTON** moves up through the menu selections or adjustment items and raises the sound level in game play. A distinct sound accompanies each activation of this button.
- The **VOLUME DOWN BUTTON** moves down through the menu selections or adjustment items or lowers the sound level in game play. A sound also accompanies each activation of this button.
- The **SERVICE CREDIT BUTTON** is used to allot credits without affecting the game's bookkeeping total. This button is also used to get out of a menu selection or return to the main menu.

OPERATOR CONTROL LOCATIONS

Menu System Operation

OPERATION

All Game Audits, Adjustments, and Diagnostics are options of the Main Menu. Each option, in turn, has its own menu, listing several choices that may be acted upon as desired.

Press the Test button to activate the Main Menu (shown below). Press the Volume Up or Volume Down buttons to move through the menu options. Notice that the options are highlighted, by turning red, in sequence. Press Test button again to activate a red highlighted option and go to the next menu level.

NOTE: Only one red highlighted option can be activated at a time.

To return to game play mode you can press the Service Credit button.

Game Adjustments for Linked Operation

To avoid confusion, we recommend that all adjustments be set to identical values before games are linked. Games might operate correctly if this is not the case, with the following exceptions:

1. *Linked games must all have identical software versions.* Newer versions may contain instructions that previous versions do not have, causing games to halt or reset at random. On-screen error messages will indicate that this may be the problem when the linking feature is enabled in each game.
2. *The graphic effects for the slaves must be the same as the master.* All games must have this feature enabled or all must have it disabled. Mixed roadkill settings can cause the games to become unsynchronized during competition and lead to incorrect final results (i.e., two first place finishes with different times, collisions with unseen objects, etc.).
3. *The linking feature will override some of the individual software settings.* For instance, the game difficulty level is controlled by the master (#1), and all linked slaves will play at this same difficulty level. The difficulty level reported by the slave games may not match the setting of the master game.
4. *The highest ranking linked game will determine some software settings.* Adjustments such as bonus times will be controlled by the games in decreasing identification order. For example, if four games are linked, slave game #3 will always override game #4 but have no effect on games #1 or #2. This permits games to have different standards to help equalize players with different skill levels.

Dip Switch Settings

NOTE: All game cabinets must have identical software to link properly. Unlock the coin door and press the TEST button. The software version number is found on the main menu of the game diagnostics. It does not matter what version is installed as long as all version numbers are the same.

DIP Switch 2 Settings Table (U97)

Function	SW1	SW2	SW3	SW4	SW5	SW6	SW7	SW8

No Effect								ON

LINKING NOTES:

- Any game set up for player 1 is the master. This cabinet is usually located at the left of the group. Games set up for player 2, 3, or 4 will be slave units. The slaves are usually to the right of game #1.
- For a 2-way link, the first game cabinet is the master (#1), the other game cabinet is the slave (#2). Switches #1 and #2 of U97 must be set for two linked games. One linking cable is required.

For a 3-way link, the first game is the master (#1), the second and third games are slaves (#2) and (#3). Switches #1 and #2 of U97 must be set for three linked games. Two cables are required.

For a 4-way link, the first game cabinet is the master (#1), the remaining games are slaves (#2, #3, #4). Switches #1 and #2 of U97 must be set for four linked games. Three linking cables are required.

- The linking feature will not function for any game if the master game is not turned on and in normal game play mode. When this game is turned off, disconnected from the linking cable, or in any other mode of operation (offline, diagnostics, etc.), none of the games will be able to link.

The linking feature will function for all other games if a slave game is not turned on and in normal game play mode. When any slave is turned off, disconnected from the linking cable, or in any other mode of operation (offline, diagnostics, etc.), the remaining games will be able to link.

The linking feature will function for some games and not others if the link activity switches are not all enabled or the software version numbers are not all the same. The master game will not recognize other games with disabled linking or a different series of game link identity numbers.

COINAGE NOTES:

There are many ways to select the types and quantities of currency recognized by the game.

- 1) The most common coin combinations for several countries are programmed into the game for you. These may be selected from the table when Standard Pricing is active (see Game Adjustments).
- 2) DIP switches may be changed with the power on. Set any switch, then check the screen to verify that the selection is enabled. Country switch settings have no effect if the CMOS Coin Settings are active.
- 3) Some European countries accept currency used in other countries. The most popular coin settings are found under the "other" selection.
- 4) Alternate settings are found under the "general" DIP switch setting.
- 5) Switches 6, 7, and 8 are not active. We recommend they be set to the factory default (OFF) positions.

CPU Board Test

The CPU Board Test (like the Start-up Test) allows the operator to check the game memory circuits.

Highlight the CPU Board test with the Volume Up or Volume Down buttons and press the Test button. When this test is activated, a "rug" pattern appears on the screen as the video circuits are tested. The screen then changes to show the layout of the RAMs and ROMs on the CPU. The memory circuits are shown as gray with a white outline. During the test, ICs are good if they turn green; they are faulty if they turn red. The game automatically returns to the Diagnostic Menu after the test is completed.

Sound Board Test

The Sound Board Test allows listening to some of the sounds that are used in this game.

To enter the test, press the Volume Up or Volume Down button to highlight the Sound Board test, then press the Test button. Highlight "Tune" for game radio stations or "Sound Effects" for game noises.

Press Volume Up to change the music selection. Press Volume Down to trigger a sound effect. Each additional push selects the next sound. Press Service Credit to exit to the Diagnostic Menu when finished.

Steering Wheel Test

The Steering Wheel Test allows the operator to check the directional movement of the steering wheel.

Before proceeding, make sure hands and any other objects are clear of the steering wheel. When this test is selected, the steering wheel will automatically rotate to the left. Follow the on screen instructions.

Highlight the Steering Wheel Test with the Volume Up or Volume Down button, then press the Test button to begin. The steering wheel turns to the left. Press the Test button and the wheel turns to the right. Press Test button again to center the steering wheel and return to the Diagnostic Menu.

Monitor Patterns

The Monitor Patterns Test provides a menu for testing the monitor.

Highlight the test with the Volume Up or Volume Down button and activate with the Test button. Continue pressing the Test button to cycle through the test screens and automatically return to the Main Menu.

The **RED, GREEN, and BLUE SCREEN** tests fill the monitor with solid color. Verify monitor color purity.

The **COLOR BARS** test fills the screen with 15 color bars in different shades to help with green, blue, and red level adjustments. Each color should appear sharp and clear. Check video brightness and contrast.

The **CROSSHATCH PATTERNS** test fills the screen with a grid and a series of dots. The grid and the dots should be clear. The dots should be round. Inspect monitor convergence, linearity, and screen size.

If any of the tests show a need for CRT adjustment, use the proper knobs on the Monitor Controls board.

Burn-in Test

The Burn-in Test continually repeats the CPU Board Test. Use this test to find intermittent CPU problems.

Press the Volume Up or Down Switch to highlight the Burn-in Test then, press the Test button to activate. When the Burn-in Test detects an error, the test stops and displays an error message on the screen.

Control buttons are ignored during burn-in. To exit this test, switch the game OFF then back ON again.

Lamp Test

The Lamp Test illuminates the selected lamp(s).

To enter the test, press the Volume Up or Volume Down button to highlight the Lamp Test, then press the Test button. This test detects intermittent or faulty incandescent bulbs critical to game operation.

ADJUSTMENTS MENU

NOTE: Game Adjustments are explained in more detail on the following pages.

Press the Volume Up or Volume Down button to highlight the Adjustments Menu option on the Main Menu, then press the Test button. Use these screens to optimize game performance and earnings.

The Adjustments Menu option allows the owner/operator to change the Game Pricing and Game Difficulty.

The Adjustments Menu offers several options. Press the Volume Up or Volume Down button to highlight an option, then press the Test button. The activated item provides a setting choice. Press the Volume Up or Volume Down button to change the current value. A confirmation box appears as shown below.

**SELECT THIS PRICING?
ARE YOU SURE?**
YES NO
TEST TO ACCEPT
UP TO INCREASE
DOWN TO DECREASE

Press the Volume Up or Volume Down button to select YES or NO, then press the Test button to lock in the setting. Selecting NO cancels any changes values and returns the previous values to memory.

Custom Pricing

Custom Pricing allows the operator to install pricing other than that of the Standard Pricing Table. Custom Pricing also allows the operator to select the amount of credits required to start a game and the amount of credits required to continue a game. This option is adjusted from the Dip Switch Settings.

GAME ADJUSTMENT MENU

The following definitions are provided to better explain the adjustments in the custom pricing menu:

- Chute/Changer Unit: Coins and bills inserted accumulate units. This adjustment specifies the quantity of units given for each coin or bill in each chute ("unit" is an arbitrary term).
- Units per Credit: This number establishes the value of each credit for pricing calculations.
- Units for Bonus: Units awarded after a player has accumulated enough points for a bonus.
- Minimum Units: No credits will be awarded until this many coin or bill units have accumulated.
- Units for Cash: Units needed to collect cash for use in game play. Cash is needed for tires, etc.
- Chute/Changer Count: Determines how coin counter responds to inputs from coin chute or bill changer.
- Show Fractions: When set to yes, fractional credits will be seen on the credits screen.
- Select Custom Pricing: When set to yes custom pricing is enabled. This overrides default settings.

GAME ADJUSTMENTS CONTINUED...

Free Play

This option selects free play. The setting choices for this adjustment are:

-YES

-NO

-Factory Setting: NO

First Place Awards Free Game

Awards a player a free game on first place finish. The setting choices for this adjustment are:

-YES

-NO

-Factory Setting: YES

Start Time Bonus

This determines the initial time a player is given to finish a race. The setting range is:

-Maximum: +20

-Minimum: -20

-Factory Setting: 0

Checkpoint Bonus Time

This awards the player a time bonus for passing a checkpoint. The setting range is:

-Maximum: +20

-Minimum: -20

-Factory Setting: 0

Continue Cash Bonus (X 10000)

This awards the player a cash bonus for continuing to race. The setting range is:

-Maximum: 20

-Minimum: 0

-Factory Setting: 6

Attract Mode Sound

This determines if the game will make sounds in the attract mode. The settings for this adjustment are:

-ON

-OFF

-Factory Setting OFF

Attract Mode Theme

This determines which tune will play in the attract mode. The settings for this adjustment are:

-(SEVERAL SELECTIONS ARE AVAILABLE)

-Factory Setting ROVIN'

High Score Entry

This determines if the game will allow High Score Entry and Display Table. The setting choices are:

-YES

-NO

-Factory Setting YES

GAME ADJUSTMENTS CONTINUED...

Minimum Volume Level

This determines the minimum volume level of the game sounds. The setting range is:

- Maximum: 32
- Minimum: 0
- Factory Setting: 8

Speed in MPH or KPH

This determines speedometer setting in miles per hour or kilometers per hour. The setting choices are:

- MPH
- KPH
- Factory Setting: MPH

Show Girls

This determines if "sexy" girls are seen at various points in the game. The setting choices are:

- YES
- NO
- Factory Setting: YES

Show Road Kill

This determines if dead animals are shown in the game. The setting choices are:

- YES
- NO
- Factory Setting: YES

Game Difficulty

This allows the operator to select the difficulty level of the game. The setting range is:

- Easiest: 0
- Hardest: 10
- Factory Setting: 5

Maximum Credits

This determines the maximum number of credits stored (pre-pay or "coin-ups"). The setting range is:

- Maximum: 99
- Minimum: 10
- Factory Setting: 30

UTILITIES

Press the Volume Up or Volume Down button to highlight the Utilities option on the Main Menu then, press the Test button.

The Utilities Menu allows operators to clear the game bookkeeping memory and to reset factory defaults.

TEST TO ACCEPT
UP OR DOWN TO CHANGE

Press the Volume Up or Volume Down button to select YES or NO, then press the Test button to lock in the setting. Selecting NO cancels any changes values and returns the previous values to memory.

CALIBRATE CONTROLS

Press the Volume Up or Volume Down button to highlight the Calibrate Controls option on the Main Menu, then press the Test button. This test stores new maximum and minimum values for each of the controls.

Follow the on screen instructions: Remove hands and feet from all controls. Set the steering wheel to the center position, then press the Test button. Turn the steering wheel to the left-most position, then press the Test button. Turn the steering wheel to the right-most position, then press the Test button. Push the gas pedal to the maximum position, then press the Test button. Push the brake pedal to the maximum position, then press the Test button once again to complete the calibrations and return to the Main Menu.

ADJUST VOLUME

Press the Volume Up or Volume Down button to highlight the Adjust Volume option on the Main Menu, then press the Test button. Remember that minimum sound level is set under Game Adjustments.

Press the Volume Up button to increase, or the Volume Down button to decrease the sound level of the game. Press the Test button to lock the volume level at the selected value and return to the Main Menu.

SINGLE SIT-IN STYLE CABINETS

SECTION FOUR

Troubleshooting

HANDLING ELECTRONIC DEVICES: This game uses complex electronic components that are SENSITIVE to static electricity. The following precautions must be observed and followed prior to handling any of the electronics that make up this game.

- 1) Ensure that the A.C. power to the game is turned off prior to servicing the electronics.
- 2) Discharge any static electricity build up in your body by touching the safety ground stud of the power supply chassis. This is to be done PRIOR to touching or handling the electronic assemblies.
- 3) Store the electronic assemblies in an anti-static area. Anti-static bags are to be used to store the game CPU assembly.
- 4) DO NOT remove or connect any electronic assemblies when the cabinet power is on. Doing so will damage the electronic assemblies and void the warranty.

1: Game appears completely non-functional.

- A: Verify that the game power switch located on the top left rear of the game cabinet is turned on.
- B: Verify that I.E.C. line cord connector is firmly and correctly seated into I.E.C. power entry module of the A.C. power chassis. If not, then gently but firmly insert the I.E.C. power cable completely into the mating receptacle of the A.C. power chassis.
- C: Check and verify the A.C. line fuse on the A.C. power chassis is not blown. If the fuse is blown, replace it with an identical fuse of the proper voltage and current rating. Note that a spare fuse is provided with the spare parts bag located in the cash box. Replace this fuse when finished.
- D: Check and verify that the correct A.C. line voltage is present at the outlet.
- E: Ensure that cabinet A.C. cable 4-pin and 9-pin connectors are firmly and correctly mated with the corresponding connectors of the A.C. power chassis.

2: Marquee lamp is non-functional.

- A: Check and verify that the fluorescent lamp is properly inserted into the lamp holders.
- B: Check and verify that the lamp and starter pins are making good contact with the mating pins of their sockets. Install a new lamp if cracks or darkened ends are found. Clean the glass bulb.
- C: Check and verify that the proper A.C. voltage is present at the power connector of the lamp assembly. If no A.C. power is present, then check the cabinet A.C. wiring from the A.C. power chassis up to the fluorescent lamp itself.
- D: Check and verify that the starter and lamp are functional by replacing them with known working units.
- E: Verify that the fluorescent lamp ballast is correct for the local A.C. line voltage and frequency. Check for continuity of both fluorescent lamp filaments, the starter, and the ballast.

3: Monitor appears non-functional.

- A: Check and verify that the cabinet A.C. line voltage cable is firmly and properly connected to mating A.C. connector on monitor. A glow will be seen near the base of the CRT if there is voltage in the filament circuits (this indicates that some power is present on the monitor board).
- B: Check and verify that the cabinet video signal cable connector is firmly and properly connected to the mating video signal input connector of the monitor.
- C: Check and verify that the monitor remote adjustment board is properly installed and connected to the monitor chassis. **Do not operate a monitor without a remote adjustment board.**
- D: Check the A.C. line fuse on the video monitor board.
- E: Verify monitor is operating correctly by replacing with a known good unit.

4: Sound is non-functional.

- A: Check and verify the cabinet wiring is correct. Ensure that the speakers are properly connected to the audio out wires from the JAMMA connector. Refer to the cabinet wiring diagram for specific wiring information.
- B: Check and verify that the power supply are correct as listed in the table below.
- C: Check and verify that the above listed D.C. voltages are present at the correct JAMMA connector pins. Refer to the cabinet wiring diagram for specific wiring information.
- D: Check and verify that the game volume has been turned up.
- E: Verify proper operation of game CPU assembly by replacing it with a known good game CPU assembly.

5: Video monitor appears non-functional.

- A: Check and verify that the JAMMA wire harness connector is firmly and properly seated to the mating JAMMA PCB edge connector.

CAUTION: DO NOT REMOVE OR INSTALL JAMMA CONNECTOR WHEN POWER IS TURNED ON. DOING SO WILL DAMAGE THE GAME CPU ASSEMBLY AND VOID THE WARRANTY.

- B: Check and verify that the D.C. power supply voltages at the game CPU assembly are set as follows:

+5V:	+4.9V to +5.1V
+12V:	+11.5V to +12.5V
-5V:	-4.75V to -5.25V

The above voltages should be set when the game CPU assembly is connected and the game is powered on.

- C: Check and verify that the non JAMMA connectors are attached at the proper location and are firmly seated.
- D: Verify that the game CPU assembly completes the power on self test sequence. Note any errors and/or failures during power on self test. The game CPU assembly should complete the power on diagnostics without error.
- E: Check and verify that the game CPU DIP Switches are set properly. Review the switch configuration information from Section One.

6: The video screen exhibits complete loss of SYNC or consistent horizontal tearing.

- A: This game uses a MEDIUM Resolution, 25Khz scan rate monitor. Ensure that any replacement monitor used is compatible with this requirement. Use of a standard video game LOW Resolution monitor will result in what appears to be horizontal tearing or complete loss of sync.
- B: Ensure that all the cabinet ground wires are connected, especially at the video monitor chassis.

7: The audio sounds distorted, muffled or missing frequencies.

- A: This game uses true Stereo Sound, with a separate audio amplifier for right and left speakers. The audio outputs from the video PCB assembly are run directly from the JAMMA connector to separate speakers. Ensure that the cabinet wiring provides separate wiring (and not a common return) for each speaker.
- B: The audio amplifiers are designed to drive full range speakers, and not discrete woofer and tweeter speakers. Ensure that the speakers are FULL RANGE response (100 to 10,000 Hz) and are rated at a minimum of 25 Watts.
- C: Check that the speaker wiring is not reversed at one of the speakers. Weak low frequencies and a thin or hollow sound quality is a symptom of incorrectly phased speakers. This condition may not be detected by the SOUND TESTS, but it will be audible during normal game operation.
- D: Using the 2 Volt A.C. setting on a digital voltmeter, measure voltages at the speaker terminals. Any reading here indicates that the supply voltages are unstable and may contain ripple or noise.
- F: Verify that the speaker is operating properly by placing in a known good unit.

8: The game will execute the power on diagnostics, but not enter normal game play.

- A: Check and verify that the D.C. power supply voltages are within specification. Use the 2 Volt A.C. setting on a digital V.O.M. and verify that the supply voltages are stable and do not contain any ripple or noise.
- B: Check and verify that the video CPU assembly is correct for the game.

9: Game operates normally, but cabinet gets very warm after several hours of use.

- A: Check bottom and rear of cabinet for blocked air flow. Move game away from sources of heat.
- B: Turn OFF the game power. Apply high power vacuum cleaner to vent holes to remove dust.
- C: Unlock and remove the rear door. Ensure that all fans are connected and operating.

10: Error Messages appear on the screen. The game does not start and there is no audio.

- A: Check any assembly (RAM, ROM, Battery, etc.) identified in the Error Message.
- B: Call your authorized distributor for help with unresolved screen messages.

WARNINGS & NOTICES

WARNING

USE OF NON-MIDWAY PARTS OR CIRCUIT MODIFICATIONS MAY CAUSE SERIOUS INJURY OR EQUIPMENT DAMAGE! USE ONLY MIDWAY AUTHORIZED PARTS.

- * For safety and reliability, substitute parts and modifications are not recommended.
- * Substitute parts or modifications may void FCC type acceptance.
- * Use only MIDWAY Manufacturing authorized components and parts. Failure to do so will void warranty and may result in incorrect and/or unsafe operation.
- * This game is protected by federal copyright, trademark and patent laws. Unauthorized modifications may be illegal under federal law. This also applies to MIDWAY logos, designs, publications and assemblies. Moreover, facsimiles of MIDWAY equipment (or any feature thereof) may be illegal under federal law, regardless of whether or not such facsimiles are manufactured with MIDWAY components.

WARNING

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generated, uses and can radiate radio frequency energy and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

WARNING

Prevent shock hazard and assure proper game operation. Only plug this game into a properly grounded outlet. Do not use a cheater plug to defeat the power cord's grounding pin. Do not cut off the ground pin.

WARNING

A very small portion of the population has a condition which may cause them to experience epileptic seizures or have momentary loss of consciousness when viewing certain kinds of flashing lights or patterns that are present in our daily environment. These persons may experience seizures while watching some kinds of television pictures or playing certain video games. People who have not had any previous seizures may nonetheless have an undetected epileptic condition.

If you or anyone in your family has experienced symptoms linked to an epileptic condition (e.g. seizures or loss of awareness), immediately consult your physician before using any video games.

We recommend that parents observe their children while they play video games. If you or your child experience the following symptoms: dizziness, altered vision, eye or muscle twitching, involuntary movements, loss of awareness, disorientation, or convulsions, DISCONTINUE USE IMMEDIATELY and consult your physician.

NOTICE

When MIDWAY ships a game, it is in compliance with FCC regulations. The FCC label on your cabinet is proof. If this label is missing or damaged, legal repercussions to the owner or distributor of the game may result. If your game does not have an FCC label, call MIDWAY immediately.

NOTICE

No part of this publication may be reproduced by any mechanical, photographic, or electronic process, or in the form of a phonographic recording, nor may be transmitted, or otherwise copied for public or private use, without permission from the publisher.

FOR SERVICE: CALL YOUR AUTHORIZED MIDWAY DISTRIBUTOR.
